

INVESTMENT OBJECTIVE

The Brentwood Wealth Global Leaders (ZAR) portfolio is a multi-managed global equity portfolio investing mainly in developed markets with the aim to generate high long term capital growth. While the fund's investments will be dominated in a range of currencies, the fund seeks to maximize total returns by investing in ZAR denominated global funds. The portfolio's exposure to assets outside of South Africa will be in excess of 80% of the portfolio's net asset value and the portfolio's exposure to equity securities will always exceed 80% of the portfolio's net asset value. The investments normally to be included in the portfolio may comprise a combination of assets in liquid form, money market instruments, interest bearing instruments, equity securities, property securities, preference shares, convertible equities and non-equity securities as well as participatory interests. The fund is designed for investors wishing to participate in capital markets and may be most appropriate for investors with a long-term investment horizon.

RISK PROFILE

Low | Low - Moderate

- This portfolio has low to no equity exposure, resulting in low risk, stable investment returns.
- The portfolio is exposed to interest rate risks.
- The portfolio is suitable for short term investment horizons

Moderate | Moderate - High

- This portfolio holds more equity exposure than a low risk portfolio but less than a high-risk portfolio. In turn the expected volatility is higher than a low risk portfolio, but less than a high-risk portfolio and the expected potential long term investment returns could therefore be lower than a high-risk portfolio due to lower equity exposure, but higher than a low risk portfolio.
- Where the asset allocation contained in this MDD reflects offshore exposure, the portfolio is exposed to currency risks.
- The portfolio is exposed to equity as well as default and interest rate risks.
- Therefore, it is suitable for medium term investment horizons.

High

- This portfolio holds more equity exposure than any other risk profiled portfolio and therefore tends to carry higher volatility due to high exposure to equity markets.
- Expected potential long term returns could be higher than other risk profiles and in turn the risk of potential capital losses is higher.
- Where the asset allocation contained in this MDD reflect offshore exposure, the portfolio is exposed to currency risks.
- Therefore, it is suitable for long term investment horizons.

WRAP PORTFOLIO INFORMATION DOCUMENT | 31 MARCH 2025

MARKET COMMENTARY

*South African index returns are quoted in rands; all other return figures are quoted in USD terms.

The FTSE/JSE All Share Index displayed strong resilience in March despite increasing headwinds such as fractures within the Government of National Unity following disagreements on VAT increases within the national budget. The ALSI still managed to post a strong gain of 3.55%. Most of this gain can be attributed to the strong performance of the Resources sector which gained 20.88%, followed by the Top 40 & Midcaps which gained 4.06% & 3.66% respectively. Nominal Bonds & ILBs posted modest gains of 0.19% (ALBI) and 0.03% (ILBI) respectively. Small Caps, Industrials & Property were the only sectors that closed the month in the red, posting losses of 0.27%, 0.22% & 1.2% (SAPY) respectively. Developed markets retreated in March as Consumer Confidence in the USA, which accounts for +/-70% of GDP, and Business Confidence alike, took a nose-dive following Trumps aggressive "reciprocal" tariff rhetorics. The MSCI World Index posted a loss of 4.4% for the month, weighed down by US Equities which posted sizeable loss of 6.55% (S&P500) as capital continues to flee from risk assets to the safety of Fixed Income & Gold. Talk of a possible tariff-induced recession is once again abuzz in the markets. The NASDAQ100 posted an even bigger loss of 8.51%. European Markets also closed the month in the red, with the MSCI Europe & FTSE100 easing slightly at -0.19% & -0.06% respectively. The German DAX was the only DM to post a gain at 2.08%. Global Fixed Income markets continued to benefit from the move from risk assets, with the Citi WGBI adding 0.68% while the ICE US TIPS index gained 0.73%. Emerging Markets outperformed for a second consecutive month, posting a modest gain of 0.67% (MSCI EM). The MSCI China H Index (Hong Kong Listed shares) gained 3.74% over the month, the Hang Seng added 1.3% while the Onshore CSI300 posted a modest gain of 0.46%. The MSCI India index was the best performer at a gain of 9.4%. Investors expect volatility to remain a constant feature within markets at least for as long as the Trump administration focuses on Foreign Policy (or for the next 3.75 years at worst). The shift to Domestic Policy is expected to be positive for risk assets.

DISCLAIMER

Managed by: Brentwood Wealth Asset Management. Authorised Financial Service Provider, FSP Number 47936.

The fund allocation (above) indicates the holdings of the model portfolio, also referred to as wrap portfolios. The portfolio holdings are quantitatively and qualitatively assessed on a quarterly basis by the independent investment committee. Where any of the above funds are not available on any particular Linked Investment Service Provider (LISP) platform, an appropriately comparable replacement fund is selected by the investment committee. Due to the possible fund composition variations resulting from such comparable replacements, the actual overall asset allocation, fees and returns may differ across platforms. Periodic portfolio rebalancing is initiated by the investment committee to realign strategic allocations whilst taking specific account of the intended risk and return profiles of the portfolios as well as capital gains tax and cost effects. Past performance is not indicative of future performance and for the historical return purposes above it was assumed that before the launch date of the portfolio, the portfolio's holdings and asset allocation remained static during the entire back tested period. The capital or the return of a portfolio is not guaranteed. A wrap fund is a portfolio consisting of a number of underlying investments wrapped into a single product. Wrap funds are not legal CIS funds of funds as the wrap fund itself is not a collective investment portfolio, but is simply a collection of separate collective investment portfolios and money market accounts. With a wrap fund the investor has direct ownership of the underlying investments. Wrap funds are not regulated by the Collective Investment Schemes Control Act and do not have a separate legal status. They are regulated by the same legislation that applies to Linked Investment Services Providers (LISPs), namely the Stock Exchanges Control Act and the Financial Markets Control Act. Investors should take note that any changes made within a wrap fund can trigger capital gains tax.

The portfolio's performance numbers are based on a master portfolio tracked in the Morningstar Direct system. These performance numbers are net of all underlying managers TER's, but gross of the portfolio management, LISP and advice fees. Performance numbers before portfolio start date are back tested.

FAIS CONFLICT OF INTEREST DISCLOSURE

Please note that your financial advisor has to disclose any conflict of interest as well as all fees received relating to your investment in writing to you.
